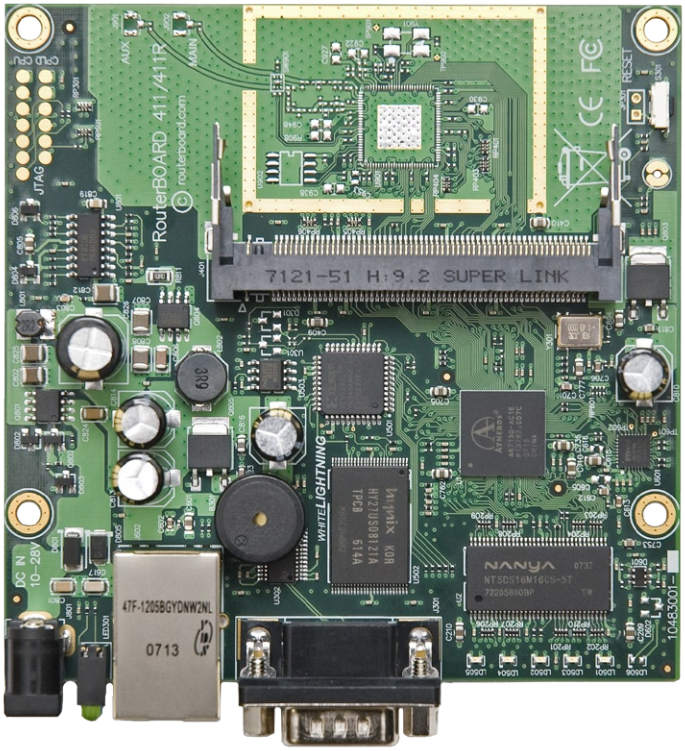
## New RouterBOARD 411A

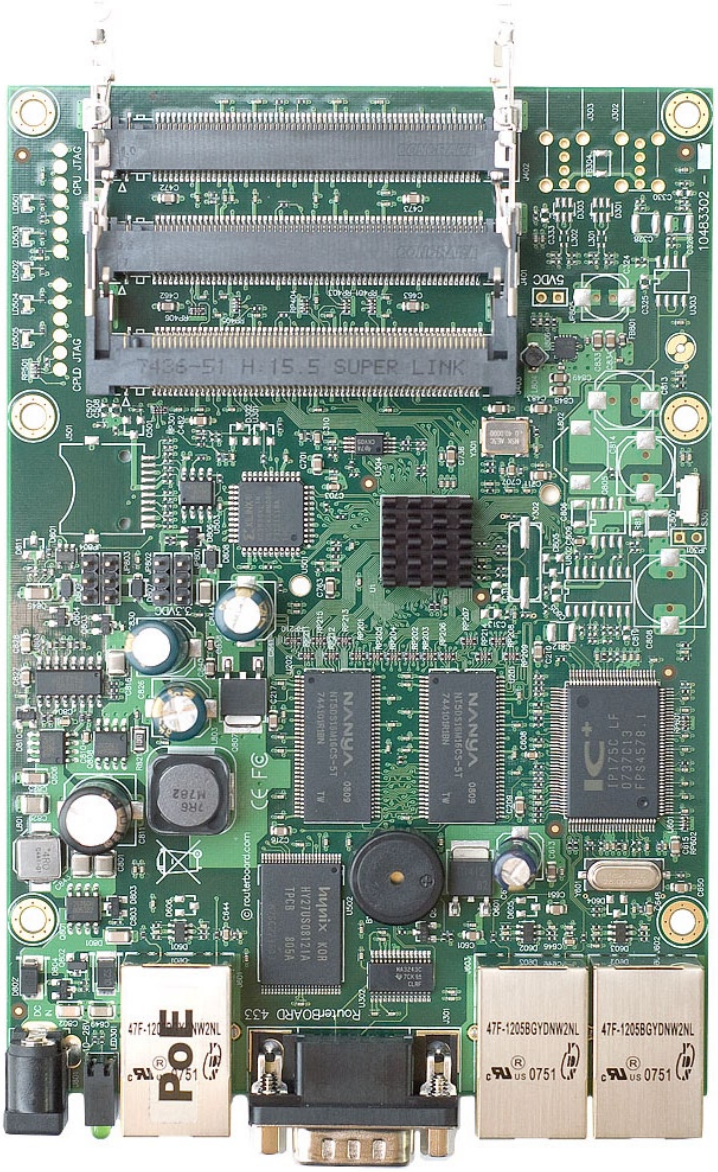


Introducing the new RB411A, the new low cost wireless device. It will be available along with RB411, but the A model will include twice as much RAM memory (64MB) and a Wireless AP RouterOS license (Level4).

RouterBOARD 411/411A are replacing the RB133C device, and with the same price and small size, offer four times speed increase, beating even RB532.

This device is already shipping to your local distributors, so ask now!

## New RouterBOARD 433



Also indroducing the RB433, the new multi-interface device that is replacing both the RB133 and the RB333. The performance of RB433 is so good that it eliminates the need of an intermediate price routerboard - it gives you all the speed with the price of a CPE.

It has three miniPCI interfaces and three ethernet ports and 64MB of RAM.

This device is also already shipping to your local distributors, so ask now!

## New MUM events

MUM **India** has completed, and had 90 visitors! Pictures and presentations from this event are available on this page: http://wiki.mikrotik.com/wiki/Events

MUM **USA** - Last call! Hotel is almost fully booked and time is running short. Make sure to register or sign up for a presentation. Distributor stands and tables are very popular, so if you are interested in getting a place - let us know while space is available.

MUM **Indonesia** - registration just opened! The beautiful island of Bali is a perfect place to meet other users, listen to presentations and take part in workshops, and then relaxing at the beach in the evening. Don't miss this one!

## RB1000 Rackmount

The RouterBOARD 1000 rackmountable case is finally shipping! The super powerful RB1000 can now be housed in this nice aluminum case and put into a rack - right where it belongs.

## The new RouterBOARD 450

Introducing the new RB450, it replaces the RB150 and gives you four times faster pps throughput at the same price and form factor. It even fits in the same boxes and has the same mounting holes. This device will be available in May this year.

RouterOS tip of the month: you can chat with other administrators connected to your MikroTik router! Just enter your message preceeded with a # symbol and it will appear to all other connected users. A quick and easy way to send a message to them.

```
[demo@demo.mt.lv] > #hello peter!
[demo@demo.mt.lv] >
demo: oh yeah, hi
[demo@demo.mt.lv] >
demo: what's happening
